

COSTS LESS, SAVES MORE

Make the switch to recycled toner and start growing your savings today.

Making the switch to recycled toner cartridges is good for the environment and good for your bottom line. Just look at these sustainability facts:

- 1,000 tons of toner cartridge by-product pollutants enter our waste stream every day.
- Each laser cartridge contains an average of 4 pounds of non-biodegradable materials.
- Three quarts of oil are burned in production of a single cartridge; approximately 9 million barrels of oil are consumed in the making of OEM cartridges annually.
- Fewer than 5% of cartridges are recycled around the world.

Laser Plus keeps an elephant's volume of toner cartridges (plastic, steel, aluminum & rubber) out of our local landfills every week. One a week, Every week.

now that's sustainability!
